WRITING ANALYTICALLY treats writing as a tool of thought, offering prompts that lead students through the process of analysis and help them to generate original, well-developed ideas. The authors of this brief, popular rhetoric believe that learning to write well requires learning to use writing as a tool to think well. Rosenwasser and Stephen emphasize analysis as a mode of enriching understanding that precedes and in some cases supplants argument. Materials in the eighth edition are better integrated, more contextualized and--when possible--condensed. A new chapter, Thinking Like a Writer, contains a broad array of strategies for integrating opportunities for writing into a course. It makes explicit a subtext that pervades the book: that to think of yourself as a writer is to see more, to think differently and to engage the meaning of things more earnestly. WRITING FOR PSYCHOLOGY, Fourth Edition offers concise assistance for students writing their research analyses using APA style. By providing concrete examples of common errors, the authors show rather than merely tell students what to do and what to avoid. This manual will help students adhere to the basics of APA style; refine critical thinking skills, library search skills, revising skills, editing skills, and proofing skills; and avoid plagiarism. Checklists precede a summary at the end of every chapter, giving students the chance to make sure they have been thorough in their reports. A fascinating account, written in real time, of the unfolding of a scientific discovery: the first detection of gravitational waves. Scientists have been trying to confirm the existence of gravitational waves for fifty years. Then, in September 2015,

came a “very interesting event” (as the cautious subject line in a physicist's email read) that proved to be the first detection of gravitational waves. In *Gravity's Kiss*, Harry Collins—who has been watching the science of gravitational wave detection for forty-three of those fifty years and has written three previous books about it—offers a final, fascinating account, written in real time, of the unfolding of one of the most remarkable scientific discoveries ever made. Predicted by Einstein in his theory of general relativity, gravitational waves carry energy from the collision or explosion of stars. Dying binary stars, for example, rotate faster and faster around each other until they merge, emitting a burst of gravitational waves. It is only with the development of extraordinarily sensitive, highly sophisticated detectors that physicists can now confirm Einstein's prediction. This is the story that Collins tells. Collins, a sociologist of science who has been embedded in the gravitational wave community since 1972, traces the detection, the analysis, the confirmation, and the public presentation and the reception of the discovery—from the first email to the final published paper and the response of professionals and the public. Collins shows that science today is collaborative, far-flung (with the physical location of the participants hardly mattering), and sometimes secretive, but still one of the few institutions that has integrity built into it.
