Contemporary Mathematics for Business and Consumers is an adventure into today's business world of the new millennium and it's associated mathematical procedures. The book is designed to provide solid mathematical preparation and foundation for students going on to courses and careers in accounting, marketing, retailing, banking, office administration, finance, insurance, real estate, and business administration. In addition, it is ideal for use in small businesses or for personal consumer needs. This is not just a textbook, but a "reference manual" for consumers and business persons alike.

Includes a tenth anniversary issue, dated Nov. 1945.

The concept of »worldmaking« is based on the idea that 'the world' is not given, but rather produced through language, actions, ideas and perception. This collection of essays takes a closer look at various hybrid and disparate worlds related to dance and choreography. Coming from a broad range of different backgrounds and disciplines, the authors inquire into the ways of producing 'dance worlds': through artistic practice, discourse and media, choreographic form and dance material. The essays in this volume critically reflect the predominant topos of dance as something fleeting and ephemeral - an embodiment of the Other in modernity. Moreover, they demonstrate that there is more than just one universal »world of dance«, but rather a multitude of interrelated dance worlds with more emerging every day.

During more than 30 years, as a collaborator with American, European and Latin American electronics magazines (*), has published a large assortment of practical circuits using common parts. In 1999 he included the first selection in a volume published by Prompt Publications in USA. The idea was to proceed with the series, publishing many volumes more. But, Prompt closed his activities and the idea was forgotten although the first volume became a best seller. Now with his own publishing house (NCB Publications) the author returned with the idea of make many volumes more of the series. So, the second volume is here proceeding with the same idea: give simple projects to the experimenters who want learn electronics using common parts and with no need of special knowledge about electronics. So, as in the first volume, many of the projects collected by the author are included in this volume, most of which you can build in one evening. The projects range from fun types through practical types to amusement types. Of course, there are other devices that can be used to teach you something about circuits and components. An important feature of theses projects are the ideas to Explore, intended for students looking for projects in science or to use in practical research. This ideal can be complemented by our book Science Fair and Technology Education Projects, also published in English by the author. We can consider this book as a source book of the easiest and fun-to-make of hundreds of projects created and published by the author during his life. (see more about Newton C. Braga in "about the author" in his site).

This informative anthology provides convenient, inexpensive access to current, carefully selected articles from such sources as Production and Inventory Management Journal, Forbes, Fortune, National Productivity Review, APICS--The Performance Advantage, and Business Week. The readings cover performance improvement; quality; human resources management for productivity; forecasting and product design; capacity, location, logistics, and layout planning; inventory and supply-chain management, and emerging trends.
