Imaging tests used to diagnose metastatic colorectal cancer include: CT scan. A CT scan is used to see if colorectal cancer has spread to lymph nodes or other organs in your chest, abdomen,... Ultrasound. An abdominal ultrasound may be used to see if colorectal cancer has spread to the liver. A ...

Metastatic Colorectal Cancer: Symptoms, Diagnosis ...

Many colorectal cancers are likely to have spread from the site where they first formed to other parts of the body long before the original tumor can be detected by current screening tests, new study results suggest. Most cancer researchers have assumed that the spread, or metastasis, of tumors typically occurs later in the disease process.

Metastatic Colorectal Cancer May Spread Early - National ...

So colorectal cancer that spreads, or metastasizes, to the lungs, liver or any other organ is called metastatic colorectal cancer. The most common site of metastases for colon or rectal cancer is the liver. Colorectal cancer cells may also spread to the lungs, bones, brain or spinal cord.

Metastatic Colorectal Cancer | Colorectal Cancer Types | CTCA

Metastasis is the major cause of death in patients with colorectal carcinoma (CRC). The most common sites of metastasis are the liver and the peritoneum. Peritoneal carcinomatosis is often considered the end stage of the disease after the tumor has spread to the liver.

Mechanisms of Metastasis in Colorectal Cancer and ...

Thoracic metastases are almost as common as liver metastases in rectal cancer patients with a low stage at diagnosis. In colorectal cancer patients with solitary metastases the survival differed between 5 and 19 months depending on T or N stage. Metastatic patterns differ notably between colon and rectal cancers.

Patterns of metastasis in colon and rectal cancer

Cancer that starts in your colon can sometimes spread to other parts of your body, including the liver. Another name for it is metastatic, or stage IV, colon cancer. Your doctor might find that the...

Colon Cancer With Liver Metastasis - WebMD

It's less common to have colon cancer spread to the bones, but it does happen to people who have metastatic colon cancer. When colon cancer spreads to the bones, it usually happens in your:

What to Expect When Colon Cancer Spreads to Your Bones

Colon cancer typically affects older adults, though it can happen at any age. It usually begins as small, noncancerous (benign) clumps of cells called polyps that form on the inside of the colon. Over time some of these polyps can become colon cancers. Polyps may be small and produce few, if any, symptoms.

Colon cancer - Symptoms and causes - Mayo Clinic

Stage IV colon cancers have spread from the colon to distant organs and tissues. Colon cancer most often spreads to the liver, but it can also spread to other places like the lungs, brain, peritoneum (the lining of the abdominal cavity), or to distant lymph nodes. In most cases surgery is unlikely to cure these cancers.

Colon Cancer Treatment, by Stage | How to Treat Colon Cancer

Stage 4 colon cancer occurs when cancer in the colon spreads, or metastasizes, to other tissues and organs. Colon cancer most often spreads to the liver, but it may also reach the lungs, the lymph...

Stage 4 colon cancer life expectancy: Diagnosis and decisions

Cancer that returns is called a recurrence. Colon cancer is most likely to recur in the first 5 years after you're treated. If your cancer does come back, seeing your doctor regularly will help...

Stage IV Colon Cancer Prognosis - WebMD

The metastatic tumor is the same type of cancer as the primary tumor. Cancer that spreads from where it started to a distant part of the body is called metastatic cancer. For many types of cancer, it is also called stage IV (4) cancer. The process by which cancer cells spread to other parts of the body is called metastasis.

Metastatic Cancer: When Cancer Spreads - National Cancer ...

Colorectal cancer (CRC), also known as bowel cancer, colon cancer, or rectal cancer, is the development of cancer from the colon or rectum (parts of the large intestine). Signs and symptoms may include blood in the stool, a change in bowel movements, weight loss, and fatigue.. Most colorectal cancers are due to old age and lifestyle factors, with only a small number of cases due to underlying ...

Colorectal cancer - Wikipedia

Regional: The cancer has spread outside the colon or rectum to nearby structures or lymph nodes. Distant: The cancer has spread to distant parts of the body such as the liver, lungs, or distant lymph nodes. 5-year relative survival rates for colon cancer.

Colorectal Cancer Survival Rates | Colorectal Cancer Prognosis
