~~Software Testing lab manual for diploma~~

...

Manual Testing is the Software Testing Technique which is carried out using the functions and features of an application. In manual testing, a tester carries out tests on the software by following a set of predefined test cases. In this testing, testers make test cases for the codes and test the software and give the final report about that software.

Manual Testing is a process in which you compare the behavior of a developed piece of code (software, module, API, feature, etc.) against the expected behavior (Requirements). And how will you know what is the expected behavior? You will know it by reading or listening to the requirements carefully and understanding it completely.

pay more for maintenance or correction later. Early testing saves both time and cost in many aspects, however

~~Software Testing – tutorialspoint.com~~

An Ad-hoc test is a test that is performed manually where the tester attempts to simulate the real-world use of the software product. It is when running ad hoc testing that most bugs will be found. It should be stressed that automation cannot ever be a substitute for manual testing. Points to note:
